

Methicillin-Resistant *Staphylococcus aureus* (MRSA) Bloodstream Infections Surveillance Results 2012–2013

Healthcare-Associated Infections Provincial Surveillance Program

Volume 1 N° 2 | November 2013

From April 1, 2012, to March 31, 2013, 88 healthcare facilities took part in the surveillance of methicillin-resistant *Staphylococcus aureus* (MRSA) bloodstream infections, for a combined total of 5,011,231 patient days (Table 1). Together, these facilities reported 147 cases of healthcare-associated MRSA bloodstream infections. The incidence rate was 0.29/10,000 patient days. This incidence rate has declined over the past five years. The proportion of methicillin resistance in healthcare-associated *S. aureus* bloodstream infections was 20%.

Incidence Rate

In 2012–2013, the incidence rate of healthcare-associated MRSA bloodstream infections (HA-MRSA BSI) was 0.29/10,000 patient days (Figure 1 and Table 2). The incidence rate of HA-MRSA BSI in teaching healthcare facilities with less than 250 beds was significantly greater than that of non-teaching facilities with less than 250 beds and teaching facilities with 250 or more beds (Figure 1). The incidence rate of HA-MRSA BSI in pediatric facilities does not differ from that of other facilities.

Total (N = 88)	0	0	0.12	0.43	0.77	2.69	0.29 [0.25-0.34]

Incidence Rate Trends

The incidence rates for HA-MRSA BSIs have decreased in the past five years (Figure 2). The incidence rate for HA-MRSA BSIs was 0.54 per 10,000 patient days during the first year of mandatory surveillance (2006–2007).

Compared with 2011–2012, the incidence rates for MRSA BSIs in 2012–2013 grew considerably in teaching healthcare facilities with less than 250 beds (Table 3). For the first time in five years, the incidence rate of HA-MRSA BSIs in pediatric healthcare facilities was not zero.

Description of Cases

In total, 299 cases of MRSA BSI were reported, two-thirds of which (67.6%) were healthcare-associated (cat. 1, 2a and 2b) and 173 of which (57.9 %) were related to the reporting facility (cat. 1 and 2b) (Table 4).

TABLE 4 Cases of MRSA and *S. aureus* Bloodstream Infections by Presumed Source of Acquisition, Québec, 2012–2013 (N, %)

Category	Source of Acquisition	2012–2013			
		MRSA		<i>S. aureus</i>	
		N	%*	N	%
1	Healthcare-Associated, related to the reporting facility	147	7.6%	660	34.0%
2a	Healthcare-Associated, related to another facility	29	1.5%	115	5.9%
2b	Healthcare-Associated, related to ambulatory care	26	1.3%	206	10.6%
3	Community	75	3.9%	787	40.6%
4	Unknown	22	1.1%	172	8.9%
Total		299	15.4%	1940	100%

* Percentage of MRSA compared with total *S. aureus*.

Catheter related bloodstream infections (CRBSI) represented the most frequently reported type of BSI (23%) of the 173 HA-MRSA BSIs (cat. 1 and 2b) in 2012–2013 (Table 4). This was followed by BSIs secondary to pneumonia (17%), urinary infection (14%), surgical site infection (12%) and skin and soft tissue infection (12%) (Figure 3 and Table 5). More than half of the CRBSIs (57.5%) and BSIs secondary to surgical site infections (60.0%) occurred in teaching healthcare facilities with 250 or more beds.

Microbiology

The proportion of methicillin resistance in HA-BSIs due to *S. aureus* dropped between 2008–2009 and 2012–2013 to 20.0% (Figure 4).

FIGURE 4 Proportion of Methicillin Resistance in Healthcare-Associated Bloodstream Infections (Cat. 1 and 2b) and All Bloodstream Infections (Cat. 1, 2a, 2b, 3 and 4), Québec, 2008–2009 to 2012–2013 (N = 86)

Laboratory surveillance of MRSA strains is carried out at the Laboratoire de santé publique du Québec (LSPQ) approximately every two years. No such surveillance was performed in 2012–2013.

Data per Facility

The incidence rates of HA-MRSA BSIs and the percentile rankings by type of facility are shown in Figures 5 through 8.

FIGURE 5 Incidence Rate and Percentile Ranking of Healthcare-Associated MRSA Bloodstream Infections (Cat. 1) by Facility for Non-Teaching Healthcare Facilities with Less than 250 Beds, Québec, 2012–2013

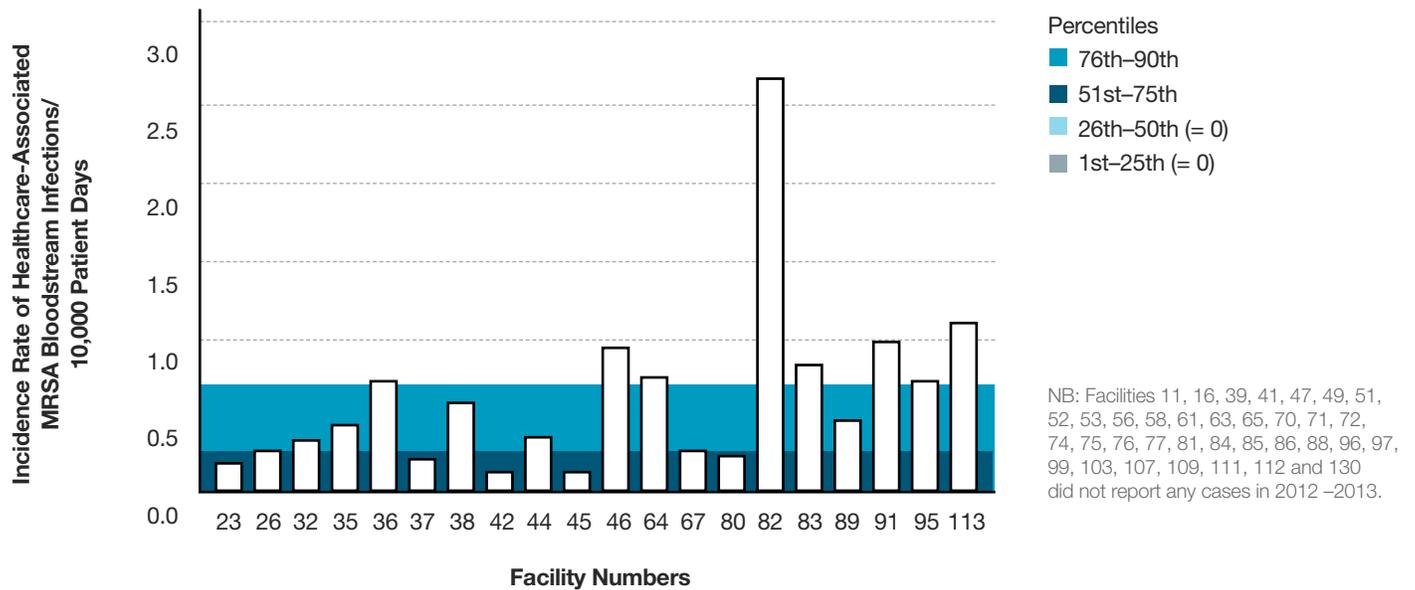

FIGURE 6 Incidence Rate and Percentile Ranking of Healthcare-Associated MRSA Bloodstream Infections (Cat. 1) by Facility for Non-Teaching Healthcare Facilities with 250 or More Beds, Québec, 2012–2013

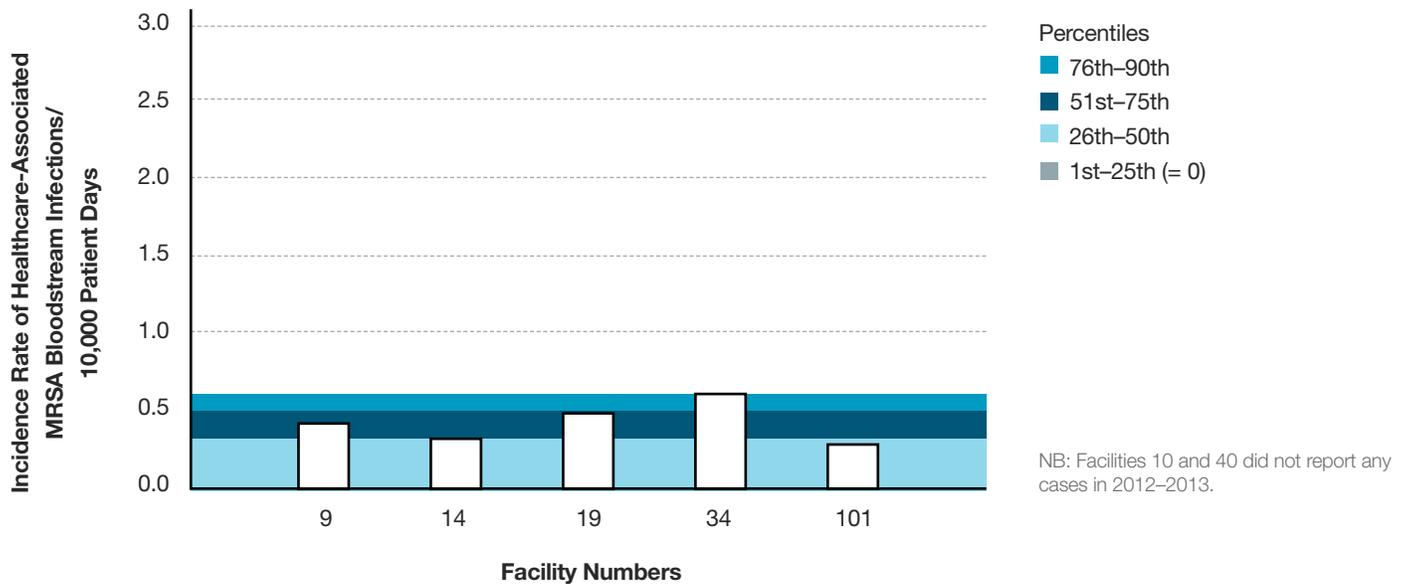

FIGURE 7 Incidence Rate and Percentile Ranking of Healthcare-Associated MRSA Bloodstream Infections (Cat. 1) by Facility for Teaching Healthcare Facilities with Fewer than 250 Beds, Québec, 2012–2013

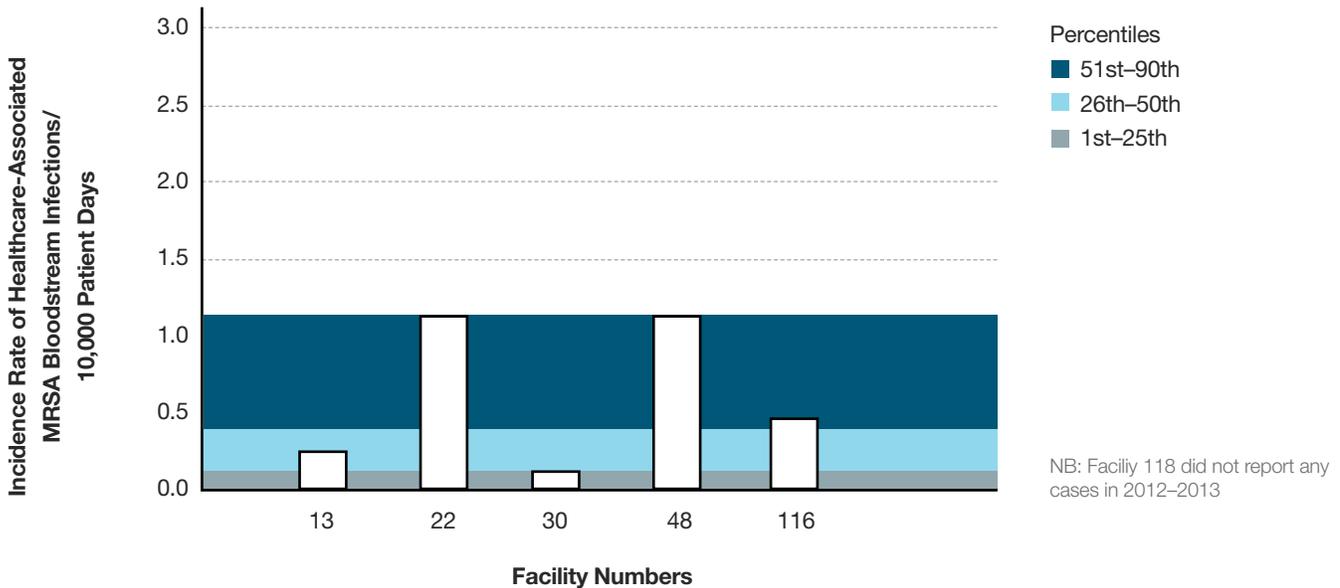

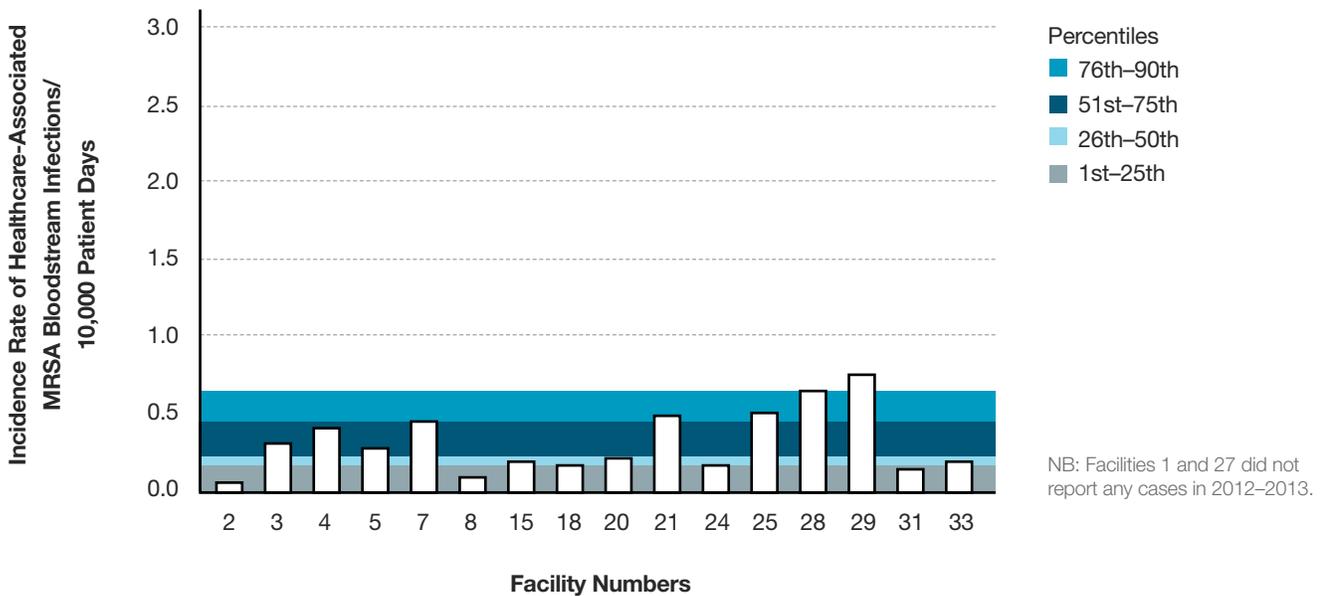

FIGURE 8 Incidence Rate and Percentile Ranking of Healthcare-Associated MRSA Bloodstream Infections (Cat. 1) by Facility for Teaching Healthcare Facilities with 250 or More Beds, Québec, 2012–2013

At the local level, in 2012–2013, the incidence rate of HA-MRSA BSIs ranged from 0 to 2.69 per 10,000 patient days. The incidence rate for the past five years of surveillance is shown in Table 6. Significant variations compared with 2011–2012 are also indicated.

Overall, 7 facilities (8.0%) exhibited an increase in the incidence rate of HA-MRSA BSIs per 10,000 patient days compared with the 2011–2012 surveillance year, and 7 facilities (8.0%) exhibited a significant decrease in this incidence rate.

Table 7 presents the number of HA-MRSA BSIs and the proportion of methicillin resistance in HA *S. aureus* BSIs for the past five years.

TABLE 6 Incidence Rate of Healthcare-Associated MRSA Bloodstream Infections (Cat. 1) by Facility, Québec, 2008–2009 to 2012–2013 (Incidence Rate per 10,000 Patient Days [95% CI])
